

(CL-2005) Database Systems Lab
Lab 5 Task

NOTE:

- Submit pdf/word document containing the screenshot of the output and the source code.
- Use prepared statements for insert and select query

Your task is

1. Themepark Registration Page

Create a form which contains the following field as shown in below figure. User should be able to submit the form. (using GET method). Upon submitting the form these submitted fields must be inserted in the themepark (database) that we have used throughout the labs.

Theme Park Registration

<input type="text" value="Park Code"/>	<input type="text" value="Park Name"/>
<input type="text" value="Park City"/>	<input type="text" value="Park Country"/>
<input type="submit" value="Submit"/>	

2. Themepark Record Page

Create another webpage in which all the themeparks that have been registered should be shown on this page in a table format which contains all the themepark details

Add a search option as well to search for a specific themepark details using Park Code.

ThemePark Records

Search Park Code

<input type="text" value="FR1001"/>	<input type="submit" value="Search"/>
-------------------------------------	---------------------------------------

Park Code	Park Name	Park City	Park Country
FR1001	FairyLand	PARIS	FR
